

GOWTHAM DATTA BOPPANA

Software Engineer | Full-Stack Developer | AI-Powered Automation | Bengaluru, India

+91 7893841973 | boppanagowtham04@gmail.com | LinkedIn | GitHub | Portfolio

Professional Summary

Software Engineer with experience in full-stack web development using React.js, TypeScript, Python, and FastAPI. Developed frontend and backend features, integrated REST and LLM APIs, and built AI-powered automation solutions. Passionate about writing clean, maintainable code and identifying real-world user problems to build practical software solutions that improve user experience and simplify everyday workflows.

Technical Skills

Programming Languages	Python, TypeScript, JavaScript, SQL
Web Technologies	HTML5, CSS3
Frameworks & Libraries	React.js, Tailwind CSS, FastAPI, Selenium, Playwright
Database	PostgreSQL
Cloud & Deployment	Render, Cloudflare Pages, Vercel

Professional Experience

Software Engineer

Sep 2025 – July 2026

AlstonAir Technologies, Bengaluru

• NGO Management Platform (Non-Governmental Organization)

- Developed and enhanced frontend modules for the NGO Management Platform using React.js and TypeScript, including dashboards, project monitoring, the Knowledge Hub for organizational resources, and the MoU module.
- Built reusable React components, custom hooks, and utility functions, and integrated REST APIs to improve code reusability and maintainability.
- Improved UI performance by optimizing rendering and API interactions, resulting in a smoother and more responsive user experience.

• NAL (New Age Land) Platform

- Developed and enhanced frontend features using React.js and TypeScript across multiple business modules, including Property Management, Locality Intelligence, Report Generation, Digital Vault, Asset Registry & Investment Analytics, and Title Search & Property History Check.
- Developed the complete backend for the Campaign Management module from scratch using Python, FastAPI, PostgreSQL, and SQL queries, implementing REST APIs, database integration, validations, and business logic.
- Built AI-powered Blog Automation by integrating NVIDIA NIM APIs and the Unsplash API to automatically generate blog content and fetch relevant images, simplifying the content publishing workflow.
- Enhanced the AI Property Assistant by integrating LLM APIs and AI-generated virtual assistant personas, evolving a rule-based chatbot into an intelligent property assistant capable of answering contextual property-related queries.
- Improved platform usability by redesigning login pages, simplifying KYC forms, standardizing UI components, optimizing dashboards, resolving frontend bugs, and refactoring the codebase for improved maintainability.

• OneClick – Social Media Automation Platform

- Built the complete frontend application from scratch using React.js and TypeScript, implementing responsive user interfaces across dashboards, authentication, campaign management, analytics, and content publishing modules.
- Implemented the **Post Now** and **Schedule Post** workflows, enabling users to publish immediately or schedule content across multiple selected social media platforms through a unified user experience.
- Built reusable React components, integrated REST APIs, resolved frontend issues, and optimized the application for responsiveness, maintainability, and code reusability.

Award: *Synergy Star Award (2026)*

- Automated the conversion of large-scale Karnataka voter datasets from JSON to Excel using Python and performed manual validation of the generated output.
- Developed Selenium-based web scraping solutions to extract large-scale medical data, including text, PDF documents, Excel files, and other linked resources.
- Developed an automated Selenium-based scraper for the WHO website to collect daily updated data and configured headless execution for server environments.
- Automated the classification of 7,000+ drug records using Python and the DailyMed website, improving dataset usability.
- Developed the PDF upload functionality and integrated APIs for automated PDF translation workflows.

Projects

AI Stack Automation – AI-Powered YouTube Content Pipeline

- Built an end-to-end AI content automation pipeline using Python to generate and publish faceless YouTube videos from a single topic.
- Integrated NVIDIA Kimi K2, Edge TTS, Pexels API, Pollinations AI, and the YouTube Data API to automate script generation, voiceovers, stock footage, thumbnails, and video publishing.
- Developed a modular workflow for script generation, video assembly, subtitle generation, thumbnail creation, and automated YouTube uploads.
- Automated the complete content creation process, significantly reducing manual effort for AI-driven video production.

OmniReach – Multi-Channel Messaging Platform

- Built a full-stack multi-channel messaging platform from scratch using React.js, TypeScript, FastAPI, PostgreSQL (Supabase), and Node.js.
- Developed workspace management, contacts, campaigns, templates, scheduling, and bulk messaging with REST API integration.
- Engineered a dedicated WhatsApp service using Baileys with QR authentication and multi-session support.
- Designed an extensible architecture supporting WhatsApp, Email, Telegram, and SMS communication channels.
- Deployed the application using Cloudflare Pages, Render, and Supabase.

Education

Bachelor of Technology in Computer Science and Engineering
KL University

2021 – 2025

Certifications

- Salesforce Certified AI Associate
- Microsoft Azure Fundamentals (AZ-900)
- Oracle Cloud Infrastructure Architect Associate
- TensorFlow Developer Certification
- Automation Anywhere RPA Professional
